

Emfit SafeBed is a "missing person alarm" that can register when a person gets out of bed, or fails to return to bed within a pre-set time.

This provides increased security for you if you have a tendency to get up and walk around unattended, because the alarm draws attention to assistants or relatives who are nearby.

Art.nr: 464001

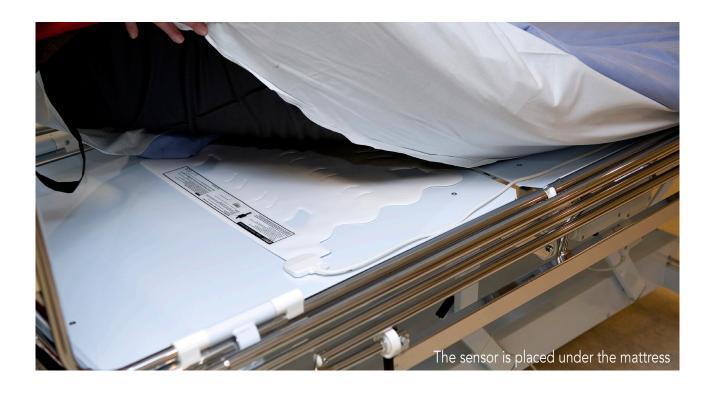

## **SAFEBED**

Emfit SafeBed consists of a sensor that is placed under the mattress, and a main unit where settings are entered.

If the time setting is short (ie. 3 seconds) the alarm will sound when the person gets out of bed. By increasing the time (up to 30 minutes) the alarm will sound if the person does not return to bed within the pre-set time.

The sensor sends a signal to the control unit which sounds an adjustable alarm that can be used to alert neraby nursing staff. It is also possible for the control unit to foward to a further alarm, such as pager or mobile phone, using our All in One accessories.

Emfit epilepsy alarms are part of a series of reliable alarm products which are well tested and used in both home and residential care around the world.
